

Mark Smalley

Developer Relations · Technical Evangelist · Blockchain Protocol Builder

// the rare DevRel who can write the protocol and explain it on a TED stage

Open to employed roles — UK/Europe & remote globally

mark@smalley.my | smalley.my | github.com/msmalley | x.com/m_smalley | linkedin.com/in/msmalley

PROFILE

Developer advocate and technical evangelist with 15 years building on — and explaining — blockchain technology. One of Southeast Asia's earliest Bitcoin voices, with a track record of making complex cryptographic concepts accessible to developers, institutions, and the general public alike. Personally designed protocols now running in production (SADO, DN-Key), built open-source SDKs used across the Bitcoin Ordinals ecosystem, and currently shipping open-source game engines with full developer documentation and embed APIs. Spoken at TEDx, FinTech conferences, and developer meetups across Asia and Europe. Using AI-native engineering workflows to ship developer tooling at unprecedented pace. Looking for a DevRel or Technical Evangelist role at a Layer 1/2 protocol, developer tooling company, or infrastructure provider where both the code and the community matter.

PUBLIC CONTENT & COMMUNITY

TALKS & VIDEO

- TEDx Sarawak (2017) — 'The Cost of Cash': demystifying Bitcoin and decentralised money for a mainstream audience — on YouTube
- WebCamp KL — regular speaker from 2011; MongoDB CMS Battle (2011, YouTube, official WebCamp KL channel) and 'Introducing Bitcoin' (2013)
- Neuroware / blockchain speaker (2016, YouTube) — developer and institutional audiences on blockchain infrastructure
- Financial Crime Summit (2017), Finnovasia, MDEC FinTech Conference, Islamic Finance News Forum — regular regional speaker

WRITTEN & PUBLISHED

- 'Unravelling Blockchain's Future' — bylined article in Islamic Finance News (IFN), 2017
- 'My Life on the Blockchain' (LVLUPKL) — SlideShare, covering decentralised infrastructure evolution from 2013
- 'Banking on the Future of Blockchains' — MDEC FinTech Conference deck, widely circulated on SlideShare
- 15 indexed SlideShare presentations on Bitcoin, Ethereum, smart contracts, and compliance (2012–2018) — slideshare.net/marksmalley1

OPEN SOURCE & DEVELOPER COMMUNITY

- **Moddable Chess Engine** (chess.moddable.games) — open-source modular chess engine with 64 playable variants, developer guide ("Build a Variant"), embed API, and plugin architecture enabling community contributions
- **Moddable Hexmaps** (hex.moddable.games) — open-source hex map framework with procedural generation, URL param API, JSON export, and iframe embed support for third-party integration
- **SADO Protocol** (github.com/sadoprotocol) — co-authored open-source, self-authenticating decentralised order-book for Bitcoin Ordinals; adopted by Ordzaar and third-party exchanges
- **Ordit SDK** — open-source indexer, parser, and API toolkit for Ordinals and Inscriptions; multiple repos under sadoprotocol.org
- **DN-Key Protocol** — authored decentralised key management standard for regulated environments
- **BackPress** — core contributor to Automattic's BackPress framework (WordPress ecosystem)
- Regular speaker at **WebCamp KL** from 2011 — one of Malaysia's earliest web and blockchain developer communities
- Founded and operated the **Blockchain Embassy of Asia** — ASEAN's first public blockchain consortium

WORK EXPERIENCE

Chief Blockchain Officer Oviato — United Kingdom

Feb 2025 – Mar 2026

Co-founded passkey-native wallet infrastructure startup. Built on Project Eden prototype (weekend hackathon → production). Contributed to the developer narrative and technical positioning that secured DraperVC investment.

- Built internal cryptographic and passkey/WebAuthN framework — designed for developer-friendly integration by third-party wallet builders
- Articulated complex infrastructure concepts clearly to non-technical investors and partners during the DraperVC fundraising
- Designed prototypes demonstrating WebAuthN's viability for consumer-grade, non-custodial wallet UX

CEO & Founder (active) Moddable Limited — United Kingdom

2025 – present

Open-source games studio shipping developer-facing engines, documentation, and tools — built entirely using AI-augmented engineering workflows. Four games, two open-source engines with guides and embed APIs, nine mods, and a developer community.

- Published two open-source engines ([Moddable Chess](https://chess.moddable.games) — 64 variants; [Moddable Hexmaps](https://hex.moddable.games)) with developer guides, embed APIs, URL parameter interfaces, and JSON import/export
- Wrote comprehensive developer documentation including a "Build a Variant" guide enabling community contributions without engine knowledge
- Built a custom PDF documentation pipeline — pagination engine with orphan prevention, atomic group detection, and multi-section assembly for 190+ page rulebook libraries
- Built the entire product suite using LLM-driven development — demonstrating AI-native engineering workflows and prompt-driven architecture at production scale
- All repositories MIT-licensed, publicly accessible, with structured data APIs for third-party integration

Sole developer of Ordzaar prototype; co-authored the SADO open protocol standard and its public SDK — a significant open-source contribution to the Bitcoin developer ecosystem.

- Personally built the first Ordzaar prototype — now the leading Bitcoin Ordinals marketplace and CakeDefi’s fifth business vertical
- Co-authored SADO Protocol and led the open-source SDK release at github.com/sadoprotocol — making Ordinals tooling accessible to the developer community
- Promoted from P4 Engineer to M3 Manager; deepened expertise in Schnorr, Taproot, Ordinals, Inscriptions, Runes

Led Malaysia’s foremost blockchain infrastructure practice — building products, educating developers and institutions, and shaping the regulatory environment for digital assets in Southeast Asia.

- Delivered blockchain developer workshops across 6 cities in 8 days — Istanbul, Amsterdam, Barcelona, Prague, Berlin, London (StartingBlock Tour 2015)
- Ran DBS Bank hackathon infrastructure — 1M+ API requests processed; 7 of 15 teams built on our stack
- Distributed 100+ developer ‘hack-pack’ USB drives pre-loaded with blockchain tooling across global workshop events
- Authored technical whitepapers, protocol specifications (DN-Key, SADO), and developer documentation
- Delivered training to DBS Bank (Singapore) and Baker Hostetler (USA); contributed to Malaysia’s Digital Asset regulatory roadmap

500 Startups Batch 9 (US\$300K+ raised, launched at TechCrunch Disrupt London). Built and promoted open-source wallet and SDK tooling. Featured on CoinDesk and BFM Radio.

- Built open-source blockchain wallet framework — the only one with themes and plugins, targeting mainstream developers rather than blockchain specialists
- Two live BFM Radio appearances (2016) — Malaysia’s English business radio — explaining blockchain to mainstream audiences
- Core contributor to Automattic’s BackPress framework — meaningful contribution to a major open-source ecosystem

TECHNICAL STACK

Bitcoin	UTXO scripting, Schnorr/Taproot, Ordinals, Inscriptions, Runes, BRC-20, BitcoinJS, SADO SDK
Ethereum	Solidity, EthersJS, Web3.js, ERC-20, ERC-721, IPFS, smart contract design
Auth	Passkeys, WebAuthN, FIDO2, DN-Key, cryptographic key management
Backend	Node.js, MongoDB, Neo4j, REST APIs, SDK design, open-source library development
Frontend	React, Svelte, VueJS, Tailwind, ThreeJS, WebGL, Canvas, SVG
AI	LLM-augmented development workflows, AI game engines, procedural generation, prompt engineering
Content	Technical writing, whitepaper authorship, developer guides, live demos, workshop facilitation

SELECTED ACHIEVEMENTS

- TEDx speaker (2017) — one of the earliest mainstream Bitcoin talks in Southeast Asia
 - StartingBlock 2015 — 6 cities, 8 days, free developer workshops across Europe & Asia
 - Deloitte Top 50 Global RegTech & Digerati50
- DraperVC investment at Oviato — technical work directly contributed to funding outcome
 - First Bitcoin talk at WebCamp KL (2013) — among the earliest blockchain developer presentations in Southeast Asia
 - 500 Startups Batch 9 and Antler Malaysia Batch 2

CREDENTIALS

Registered HRDF Trainer	500 Startups Batch 9 · Antler Malaysia Batch 2
Core contributor — Automattic BackPress (WordPress)	Silver Duke of Edinburgh Award
